Dry Micro Ingredient System

Comco has designed an easy-to-use, continuous duty micro system that is perfectly suited for a variety of agricultural applications.

System Highlights

- Handles multiple dry micro-ingredients in one system
- An automated platfom that stores, weighs, and dispenses low-inclusion dry ingredients
- Typical batch cycle time of 0.5 - 4 minutes depending on ingredient and inclusion rate
- Weighing accuracy = ±5 grams per ingredient
- Vibratory Feeders designed for continuous-duty operation
- Low Maintenance Components: Pumps and components designed to minimize wear
- 10 & 12 Bin Configurations Available
- Stainless Steel Contact Surfaces resist corrosion and buildup
- Inventory Management: Optional individual bin scales for live tracking
- Seamless Integration: Connects to feed mill management platforms
- Batching software is optional if required
- Pre-wired & Pre-plumbed: Faster installation and setup
- 24/7 Remote Support: Always available support team

Comco also provides...

Feed mill automation · Engineering design · CSA certified panel building
In-line dry flow weighing devices · Water dosing systems

WHY USE A DRY MICRO INGREDIENT SYSTEM?

A dry micro-ingredient system is an automated platform that stores, weighs, and dispenses low-inclusion dry ingredients with high accuracy directly into a batch or mixer.

- Designed for grams-to-pounds inclusion rates
- Handles multiple ingredients in one system
- Fully automated weighing and discharge
- Integrates with existing feed systems

Built for Precision, Accuracy & Efficiency

The Foundation of Better Production

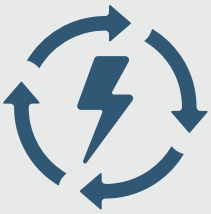

Precision That Saves You Money

- No more guessing or waste—hit target rates every time
- Specialty ingredients are expensive; precise dosing protects profitability
- Small inclusion rates demand reliable control

Accuracy that Drives Results

- Achieve tight mixer accuracy with reduced variation
- Consistent feeding improves overall animal performance

Efficiency That Streamlines Your Operation

- Reduce unnecessary costs from improper dosing
- Lower labor, freight, and milling expenses
- Build a more flexible, dependable supply chain
